

System Backup

System backup is a functionality aimed to backup database and database configuration of Master server.
This backup contains:

- Database backup
- Configuration file **`/usr/local/solusvm/includes/solusvm.conf`**

SolusVM creates the backup and transfer it to FTP storage.

To start the system backup manually run the following command on master server:

```
php /usr/local/solusvm/system/systembackup.php
```
