

FTP Servers

In SolusVM you can use several predefined FTP servers. This can be useful if one wants to keep Backups on different places.

To add an FTP server:

1. Go to **SolusVM admin panel > Configuration > FTP Servers** and click **Add FTP Server**
2. Fill in the FTP server settings and click **Add**:

Dashboard | Configuration | FTP Servers | Add FTP Server

Name:	<input type="text"/>	Unique name for this FTP server
IP or Hostname:	<input type="text"/>	IP or hostname of the FTP server
Username:	<input type="text"/>	FTP server username
Password:	<input type="password"/>	FTP server password
Port:	<input type="text" value="21"/>	FTP server port, usually port 21
Directory:	<input type="text" value="/"/>	Directory the data will be saved to, / is default

[Back to FTP Server List](#) [Add](#)

After that predefined FTP servers can be selected for Auto FTP backup in **Profile** dropdown menu at **SolusVM admin panel > Nodes > {Node} > Auto FTP Backup**:

FTP Server Settings

Profile	<input type="text" value="Select..."/>
IP or Hostname	<input type="text"/> IP or hostname of the FTP server
Username	<input type="text"/> FTP server username
Password	<input type="password"/> FTP server password
