

System Scripts

SolusVM has a set of system scripts that can be used to do certain tasks across the SolusVM cluster.

Scripts are stored in `/scripts` on the master server.

Current scripts:

<code>upcp</code>	Update SolusVM components across all nodes
<code>upcp-beta</code>	Update SolusVM beta components across all nodes
<code>ipv4check</code>	Check status of free ips
<code>vm-status-update</code>	Update the status of all virtual servers
<code>vm-destroy</code>	Destroy virtual server
<code>vm-migrate</code>	Update virtual server information in database
<code>update-bandwidth</code>	Update Bandwidth limits for all vps on specified node
<code>ftp-restore</code>	Restore virtual server from ftp backup
<code>openvz-ipv6</code>	Enable/Disable IPv6 support for openvz
<code>fix-acl</code>	Set admin level to full administrator
<code>database-repair</code>	Run mysqlcheck repair on master database
<code>mass-console-pass</code>	Sets a new console password for all vps on specified node
<code>help</code>	Display this information

Usage: `/scripts/<command> [args]`
