

# Creating a customer

Every virtual server must have a client-owner. Before you move on to deploying virtual servers, you need to create a test/example client.

Navigate to **Clients > Add client** or click **Add client** at the left.

The screenshot shows a web dashboard with a dark sidebar and a light main content area. The top navigation bar includes links for Dashboard, Virtual Servers, Clients, Resellers, IP Blocks, Nodes, Plans, Media, and Configuration. The 'Clients' menu is open, showing 'List Clients' and 'Add Client' (highlighted with a green arrow). The left sidebar has a 'Quick Jump' section with dropdown menus for Clients, Resellers, Virtual Servers, Nodes, and Metrics. Below this is a 'Shortcuts' section with buttons for Dashboard, Add Virtual Server, Virtual Servers, Add Client (highlighted with a green arrow), Add Reseller, and Settings. The main content area shows an 'IP Blocks' table with the following data:

Name	Type	Used	Free	R
network-55	IPv4	0	0	
private	IPv4	0	97	
10.40.1.83-10.40.1.105	IPv4	11	12
