

Creation of Configurable Option group for OS selection

1. Login to WHMCS web interface.
2. Open **Setup > Product/Services > Configurable Options > Create a New Group**.
3. Type the required **Group Name** and **Description** and select products which will use the configurable option in **Assigned Products**.
4. Click **Save Changes**.
5. Click **Add New Configurable Option**.
6. Select **Dropdown** in **Option Type** field and type **Operating System** in **Option Name**.

Note: **Option Name** has to be exactly **Operating System**. If it is required to change the name of the option (to a different language, for example) - use [Hash Variables](#).

7. In **Add Option** field type the following:
filename-of-template | Displayed name

Where

filename-of-template - filename of a template without extension (.tar.gz). Can be seen in **SolusVM > Meda > List Templates > <required_virtualization> > Edit Template > Template** section.

Displayed name - the name of the template visible in WHMCS. Can be set as preferred.

For example - if the full filename is `debian-8.0-x86_64.tar.gz`, **Add Option** field will contain **debian-8.0-x86_64 | Debian 8.0**.

8. Click **Save Changes**.

For more information regarding possible settings for Configurable Option group refer to [Configurable Options](#) section.
