

Using vzmigrate utility

The following should be done to migrate OpenVZ 6 container between OpenVZ 6 nodes using vzmigrate:

1. Install **openssh-clients** package:

```
# yum install openssh-clients
```

2. Download a script for installation of SSH keys:

```
# wget http://files.soluslabs.com/solusvm/scripts/keyput.sh
# chmod a+x keyput.sh
```

3. Install SSH keys on the target server:

```
# ./keyput.sh destination_node_ip destination_node_sshport
```

4. Find VMID of the container for migration:

```
# vzctl list
```

5. Migrate the container:

```
# vzmigrate -v --ssh="-p destination_sshnode_port" destination_node_ip VMID
```

6. Update Master node database with the new location of VPS

```
# /scripts/vm-migrate ID NEWNODEID
```

where ID - ID of the migrated VPS, can be seen in column **ID** in **SolusVM > Virtual Servers**; NEWNODEID - ID of the target node, can be seen in **SolusVM > Nodes**.

For example:

```
# /scripts/vm-migrate 20 5
```
