

System Backup Configuration

To configure system backup:

1. Navigate to **SolusVM > Configuration > System Backup**
2. Specify FTP settings of the FTP server and click **Update**

To restore backup:

1. Download the backup file from FTP server to master server and extract the zip file.
2. It will have two files:

```
# database.gz  
# solusvm.conf
```

3. Extract the database file like:

```
# gunzip database.gz
```

4. Fetch the current database details from server `/usr/local/solusvm/includes/solusvm.conf`
5. Restore database like below:

```
# mysql --user=USER --password=PASSWORD DATABASENAME < database
```
