

Syncing the templates to Slave Nodes

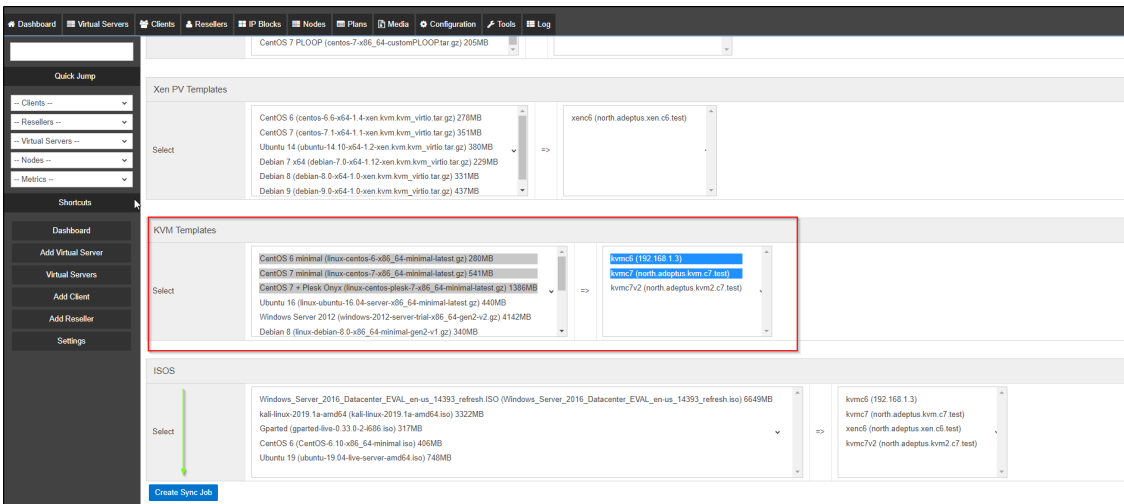

All the uploaded templates should be synced to Slave Nodes in order to create the virtual servers.

For this, **Media Sync** feature can be used.

Navigate to **Media > Media Sync** page and click **Create** button.

On the next page, select all the templates you want to sync and select the appropriate node (you can select multiple templates and nodes at once), then click **Create sync job**.

✓ Sync job will be executed in not more than 5 minutes.
