

Adding the PowerDNS master to SolusVM

You only need to add the DNS Master to SolusVM.

1. From the admincp go to **Configuration > PowerDNS > Add**
2. Give the dns server a name and click Continue:

Dashboard > Configuration > Power DNS > Add DNS Server

Name	<input type="text" value="DNS Cluster 1 Master"/>
------	---

CONTINUE >>

3. Fill in all the master dns servers SQL details:

Dashboard > Configuration > Power DNS > Edit DNS Server

Name	<input type="text" value="DNS Cluster 1 Master"/>
Description	<input type="text" value="DNS cluster for forward & reverse DNS"/>
IP Address	<input type="text" value="MASTER.DNS.IP"/>
SQL Port	<input type="text" value="3306"/>
SQL Username	<input type="text" value="root"/>
SQL Password	<input type="password" value="....."/>
SQL Database	<input type="text" value="powerdns"/>

BACK SAVE CHANGES

4. You now have the button options at the bottom to test the connection, view zones and create reverse dns zones.
