

# Connecting SolusVM KVM Slave to SolusVM Master node

Right after the installation is finished, SolusVM displays the KEY: PASSWORD pair.

```
Installation Complete. Full install log: /tmp/install.log
Add this hypervisor to your SolusVM master using the following details:
ID Key ..... : j0Bm7WgAoKAC6gvj5c0Vp09LMEFYw0T3809NLXE11NyEAmhc
ID Password .... : 2rq01YRuoSKNa0uW1q0d13Ca1N2wFTm8fmcChIcCEMSB072dI
IMPORTANT!! You are required to setup a network bridge before you can use KVM on this server
Please see the following link: https://documentation.solusvm.com/display/DOCS/KVM+Bridge+Setup
```

✔ You can always find this pair in /usr/local/solusvm/data /solusvm.conf file.

With this pair, navigate to [https://master\\_server\\_ip:5656/admincp/](https://master_server_ip:5656/admincp/) > **Nodes > Add node**, fill the required fields and use **ID Key** and **ID Password**.

On the next screen, adjust other related settings.
