

Serial console configuration

1. For HTML 5 serial console to work it is required to have [the hostname of the server secured with a valid certificate](#). Location for certificates is:

```
/usr/local/svmstack/nginx/ssl/ssl.crt  
/usr/local/svmstack/nginx/ssl/ssl.key
```

/usr/local/svmstack/nginx/ssl/ssl.crt should contain the certificate.

/usr/local/svmstack/nginx/ssl/ssl.key should contain the private key.

2. In **SolusVM > Nodes > Edit Node** next to localhost set correct hostname for the master node in **Hostname** field.
3. In **SolusVM > Configuration > Settings > Virtualization** set **Html 5 Serial Console Admins** to **On** to allow Administrator use to use HTML 5 Serial Console.
To allow clients to use HTML 5 Serial Console - set **Html 5 Serial Console Clients** to **On**.
4. Restart Nginx web server on the master server:

```
# service svmstack-nginx restart
```

5. Open **SolusVM > Virtual Servers > VPS > Console > Create Session > HTML 5 Console**.
