

# Partitioning for SolusVM Master

Partitioning of the service is always the vital part. However, for SolusVM Master is rather agile and it is possible to allocate all the space to / partition.

In case SolusVM Master will be used for hosting OpenVZ containers, then recommended partition is the following one:

- / 80GB
- SWAP 2 times RAM (if RAM 2GB otherwise RAM + 2GB is plenty)
- /vz remaining space (templates & virtual servers will be stored here)
