

# API

For some tips and advanced examples, see [Using SolusVM API: examples, tips and tricks](#)

This chapter contains information on API implemented in SolusVM.

- Admin
  - Virtual Server Functions
    - Create Virtual Server
    - Add IP Address
    - Boot Virtual Server
    - Change Boot Order
    - Change Owner
    - Change Plan
    - Serial Console
    - Delete IP Address
    - Virtual Server Information
    - Virtual Server State
    - Check Exists
    - Mount ISO
    - Unmount ISO
    - Reboot Virtual Server
    - Change Hostname
    - Rebuild Virtual Server
    - Change Root Password
    - Virtual Server Status
    - Suspend Virtual Server
    - Unsuspend Virtual Server
    - VNC Info
    - Change VNC Password
    - Terminate Virtual Server
    - Disable TUN/TAP
    - Enable TUN/TAP
    - Enable PXE
    - Shutdown Virtual Server
    - PAE Enable/Disable
    - Disable PXE
    - List Virtual Servers
    - Change Bandwidth Limits
    - Change Memory
    - Change Hard Disk Size
    - Change CPU
    - Change Network Speed
    - Rescue Mode
    - Change Main IP address
    - Reconfigure Network
    - List Media Groups
    - Change Media Groups
  - Node Functions
    - List ISO Images
    - Xen Node Resources
    - List Node Groups
    - List Nodes by Name
    - List All IP Addresses for a Node
    - List Plans
    - Node Statistics
    - List Templates
    - List Nodes by ID
    - List Plans Per VT
    - Node lock status
    - Lock node
    - Unlock node
  - Client Functions
    - Client Authenticate
    - Client Key Login
    - Check if Client Exists
    - Create Client.
    - Change Client Password
    - List Clients
    - Delete Client
    - Delete Reseller
    - Reseller Information
    - Modify Reseller Resources
    - List Resellers
    - Create Reseller
    - Edit Client

- [Change Client Username](#)
