

ebTables Hook

The pre-hook that runs at the start of each vif cycle

```
/usr/local/solusvm/data/hooks/ebtables-pre.sh
```

The variables that are passed:

```
$1 - Interface (vif)
```

IPv4 loop hook that adds entries to each vif while looping through each IP

```
/usr/local/solusvm/data/hooks/ebtables-iploop.sh
```

The variables that are passed:

```
$1 - Interface (vif)  
$2 - Ippaddress
```

IPv6 loop hook that adds entries to each vif while looping through each IP

```
/usr/local/solusvm/data/hooks/ebtables-iploop6.sh
```

The variables that are passed:

```
$1 - Interface (vif)  
$2 - Ippaddress
```

Post hook that runs at the end of each vif cycle

```
/usr/local/solusvm/data/hooks/ebtables-post.sh
```

The variables that are passed:

```
$1 - Interface (vif)
```

Example files of all 4 hooks can be found in `/usr/local/solusvm/data/hooks/` named `ebtables-pre.sh.example`, `ebtables-iploop.sh.example`, `ebtables-iploop6.sh.example` and `ebtables-post.sh.example`
